Zend PHP for IBM i “Jump-Start” Services www.rpgtraining.net

GEMKO has created jump-start services to get your IBM i environment up and running with Zend’s native PHP environment in 1 - 2 day(s). The results will include a live browser application using your data on your server and a technical knowledge transfer to your programming staff.

Course JSPHP – Browser Enabled Applications for IBM i

The GEMKO “Jump-Start” package includes:

- a. Installation of Zend PHP on your IBM i
- b. Zend Technical Knowledge Transfer (*targeted towards programmers*)
- c. Creation of a browser based application integrated with OS/400 DB2 data; application includes:
 - i. 2 screens
 - ii. 20 columns of data from no more than 3 files
 - iii. column level sorting
 - iv. function to create excel spreadsheet from data

Expected Benefits and Values:

- IBM i Data / Application’s being accessed via a web browser
 - Improved presentation “look & feel”
 - Extended access for internal employees, external employees, vendors, customers...
 - IBM i Data integration with excel
- PHP technology framework in place to deploy additional IBM i browser based applications

Terms & Conditions:

- IBM i server OS at V5R3 or higher.
- Zend PHP software and licensing is customer responsibility (as an IBM Business Partner, GEMKO can assist with ordering the product).
- Network access (internal or external) is customer responsibility.
- Database knowledge required to create the application (customer responsibility).
- GEMKO is not liable for any system degradation resulting from the implementation of PHP environment.
- GEMKO Customer Agreement must be on file to perform services.
